"A novel circadianly expressed Drosophila melanogaster gene dependent on the period gene for its rhythmic expression.";

EMBO J. 15:1625-1631(1996).

-!- FUNCTION: INVOLVED IN THE GENERATION OF BIOLOGICAL RHYTHMS
-!- FUNCTION: INVOLVED IN THE GENERATION OF BIOLOGICAL RHYTHMS
-!- FUNCTION: INVOLVED IN THE HEAD, OSCILLATES IN ABUNDANCE WITH A DAILY PEAK DURING EARLY NIGHT, EYEN UNDER CONSTANT DARKNESS. OSCILLATION
IS DEPENDENT ON PERIOD (PER) FUNCTION.

-!- TISSUE SPECIFICITY: EXPRESSED IN HEAD, BUT NOT IN THE BODY.
-!- TISSUE SPECIFICITY: EXPRESSED IN 24 HOURS EMBRYO.

KATAOKA J. HABUKA N., MIYANO M., MASUTA C., KOIWAI A.;

"Nucleotide sequence of cDNA encoding alpha-luffin, a ribosome-
inactivating protein from Luffa cylindrica.";

Plant Mol. 18:1199-1202(1992).

-i- CATALYTIC ACTIVITY: ENDOHYDROLYSIS OF THE N-GLYCOSIDIC BOND AT O
SPECIFIC ADENOSINE ON THE 28S RNA.

-i- SIMILARITY: TO OTHER BACTERIAL AND PLANTS RIBOSOME-INACTIVATING
PROTEINS. BELONGS TO TYPE 1 RIP.

PROTEINS. BELONGS TO TYPE 1 RIP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               000465;

"Structure and expression of the nuclear gene coding for the chloroplast ribosomal protein L21 developmental regulation of a housekeeping gene by alternative promoters.";

MO1. Cell. Biol. 13:2614-2622(1993).

-i- FUNCTION: THIS EROTEIN BINDS TO 23S RIBOSOMAL RNA IN THE PRESENCE OF PROTEIN L20 (BY SIMILARITY).

-I- SIMILARITY: BELONGS TO THE L21P FAMILY OF RIBOSOMAL PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             EMBL; X56691; CAA40019.1; -.

PROC. Natl. Acad. Sci. U.S.A. 89:251-255(1992).

PUNCTION: RECEPTOR FOR SONATOSTATIN WITH HIGHER AFFINITY FOR SONATOSTATIN-14 THAN -28. THIS RECEPTOR IS COUPLED VIA PERTUSSI TOXIN SENSITIVE G PROTEINS TO INHIBITION OF ADENTAL CYCLASE. I ADDITION IT STIMULATES PHOSPHOTROSINE PHOSPHATASE AND NA+/H-EXCHANGER VIA PERTUSSIS TOXIN INSENSITIVE G PROTEINS.

SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

TISSUE SPECIFICITY: ETTAL KIDNEY, FETAL LIVER, AND ADULT PANCRE BRAIN, LUNG, JEJUNUM, AND STOMACH.

SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        between the Swiss Institute of Bioinformatics and the Inthe European Bioinformatics Institute. -!- FUNCTION: RECEPTOR FOR SOMATOSTATIN WITH HIGHER AFFINITY FOR SOMATOSTATIN-14 THAN -28. THIS RECEPTOR IS COUPLED TO PHOSPHOTYROSINE PHOSPHATASE AND NA+/H+ EXCHANGER VIA PERTUSSIS TOXIN INSENSITYEE G PROTEINS.
-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
-!- TISSUE SPECIFICITY: BRAIN, PITUITARY, ISLET, JEJUNUM, STOMACH, HEART, SPLEEN.
